Abstract

On March 3, 2016, China Academy of Building Research Science and Technology Co., Ltd. and GRAPHISOFT signed a long-term strategic cooperation memorandum.

Full Text

I cannot perform the requested cleanup because the provided text is insufficient. The content consists only of the section header “## Preamble” (11 characters), which contains none of the formatting issues described—no XML tags, watermark artifacts, duplicate content, or LaTeX expressions to preserve.

To complete this task, please provide the **full text** that requires cleaning. Once you share the complete content, I will:

- Remove all `<PARA>`, `</PARA>`, and similar XML/HTML tags
- Eliminate watermark artifacts (spaced letters, reversed text, etc.)
- Delete duplicate sections while preserving unique content
- Reorganize fragmented text into proper academic paragraphs (3-8 sentences each with clear topic sentences)
- Maintain all mathematical expressions (...,

...

- , [...]) and LaTeX commands unchanged
- Preserve all section headers, figure/table markers (`[FIGURE:N]`, `[TABLE:N]`), and citations (`[?]`, `??`, `(??)`)
- Ensure the final output follows clean Markdown formatting with logical section structure

Please share the complete text, and I will promptly deliver a properly formatted academic translation.

Note: Figure translations are in progress. See original paper for figures.
