### Abstract

Analyzing the evolution of Guangxi's eco-tourism policy texts from the perspective of policy instruments facilitates the Guangxi Zhuang Autonomous Region in issuing subsequent policy texts, adjusting and promoting eco-tourism system construction, and is of great significance to the sustainable and sound development of eco-tourism. This paper compiles 62 representative eco-tourism policy documents from January 2007 to January 2022, and employs text analysis methods to quantitatively analyze these policy texts in terms of policy instrument types and developmental stages of Guangxi's eco-tourism policies. The study identifies several current problems: environmental policy instruments are most frequently used, indicating an imbalance among policy instruments; infrastructure appears more frequently in supply-oriented policy instruments, while demand-oriented policy instruments appear less frequently; simultaneously, this paper finds that the distribution of policy instruments within the eco-tourism system is not sufficiently balanced. Addressing the series of issues identified in the above investigation, this paper proposes relevant suggestions and improvement ideas, hoping that these recommendations can provide references and future development directions for the advancement of eco-tourism policies in Guangxi.
