

## IaaS Storage

Scale applications and distribute services globally with S3-compatible object storage.

## Solution Overview

B2 Cloud Storage is an always-hot platform, ensuring your data is readily available with a 99.9% uptime SLA through APIs, SDKs, and CLI. With seamless connectivity to leading CDN and compute providers, you gain better data mobility and the flexibility to fit your existing DevOps environments, multi-cloud, or hybrid cloud architecture. The platform's attractive single-tier pricing for both storage and egress means your market success and growing usage won't lead to spiraling hyperscaler bills.

## Key Benefits

- **Plug-n-Play:** Point your application to S3-compatible endpoints to begin using B2 Cloud Storage—no code overhaul needed.
- **Flexible:** Seamlessly connect to leading CDN and compute services for better data mobility and global scaling.
- **Secure:** Built for availability and performance to handle developer workloads with SSE, CORS rules, and other security features to protect your data.
- **Affordable:** A quarter of the price of AWS S3 with \$0 egress to leading CDN and compute partners, to unlock more from your cloud spend.

“

Backblaze was a natural fit for us because it was more reliable and less expensive, enabling us to get ahead of where the business is going.”

—Dave Barney, CTO, Kanopy

## Seamless Integrations Including

**Pricing starts at  
\$6/TB/Month**

B2 Cloud Storage starts at a predictable \$6/TB/month with no tiers, hidden fees, or minimum storage duration. Enjoy free egress up to 3x your storage average with additional egress just \$0.01/GB. Yes, this is a fraction of the rates of others so you can afford to store and use all of your data.
